

# Quathera Getting Started Guide

From Zero to Testing in 15 Minutes

## Step 1: Create Your Account

Visit [quathera.com/signup](https://quathera.com/signup) and create your account. Select a plan: Free Trial (14 days), Starter (\$300/month), or Professional (\$500/month).

## Step 2: Create Your First Project

Click 'Create Project', enter a name for your web application, and optionally add a description. Your project will appear in the header dropdown.

## Step 3: Download & Install Agent

Download the Quathera Agent for your OS (Windows, Mac, Linux). Install and launch it. Enter the connection code shown in your web dashboard.

- Your credentials never leave your network
- Agent runs securely on your infrastructure

## Step 4: Configure Test Sites

Test Sites define WHERE to test and WHO to test as. Configure sites for each user type (Admin, Regular User) across environments (QA, Staging, Production).

- AI discovers forms on QA environment
- Run tests on any environment you choose
- Login pages require credentials; public pages don't

## Step 5: Discover Form Pages

Click 'Start Discovery' and watch AI crawl your QA environment. It logs in as each user type and finds every form automatically.

## Step 6: Map Each Form

Click the Map icon on each form. AI analyzes all fields, conditional paths, validation rules, and compares against your spec.

## Step 7: Run Self-Healing Tests

Execute tests on QA, Staging, or Production. AI runs Create→Verify→Edit→Verify cycles, catches visual issues, and auto-heals broken locators.
